```
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                               SUMMARIES

It currently consists of 72 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary caps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finishe sequence. I 804: contig of 804 in length 1802: contig of 978 in length

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RBS
                                                         are also intrinced but some of these may be forthfolds. The tength in codons is given for each CDS.

Usually the highest scoring match found by fasta -o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons using a specially developed Hidden Markow Model (Kropp et al., Nucleic Acids Research, 22(22):4/68-4/78(1994)) and the Frameplot program of Bibb et al., Gene 30:157-66(1984) as implemented at.

http://www.inh.go.jp/
lun/cgi-bin/frameplot.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon of acts) with a preceded by an upstream ribosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon. If this cannot be identified we choose the most important in sequence of in may be shorter because we arrange for a small overlapping sections once, or longer, because we arrange for a small overlapping sections once, or longer, because we arrange for a small overlapping section once or longer. Statis and Stabs.

lun/cgi-lan/framepidt.pl. CAUTION: We may not have predicted the correct initiation codon. Where possible we choose an initiation codon (atg, gtg, ttg or (att)) which is preceded by an upstream tibosome binding site sequence (optimally 5-13bp before the initiation codon). If this cannot be identified we choose the most upstream initiation codon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The more significant matches with motifs in the PROSITE database are also included but some of these may be fortuitous.

The length in codous its given for each CDS.

The length in codous is given for each CDS.

The bost is the highest scoring match found by fasts — o is given for CDS which show significant similarity to other CDS in the database. The position of possible ribosome binding site sequences are given where these have been used to deduce the initiation codon. Gene prediction is based on positional base preference in codons Nucleic Acids Research, 22(22):4768-4778(1994), and the FramePlot program of Eibb et al., Gene 30:157-66(1984) as implemented at
        Submitted (14-FEB-2000) Streptomyces coelicolor sequencing project, Sanger Centre, Wellcome Trust Genome Campus, Minxton, Cambridge CB10 15A E-mail: barrell@sanger.ac.uk Cosmids supplied by Prof. David A.                                                                                                                                                                                                             Streptomyces coelicolor sequencing at The Sanger Centre is funded by the BBSRC and Becwilf Genomics
Details of S. coelicolor sequencing at the Sanger Centre are available on the World Mide Web.
(URL: http://www.apager.ac.uk/Projects/S_coelicolor/)
CDS are numbered Using the following system eg SC787.01c. SC (S. coelicolor), 787 (cosmid name), .01 (first CDS), c (complementary)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   important: This sequence MAX NoT be the entire insert of the sequence clone. It may be shorter because we only sequence overlapping aections once, or longer, because we arrange for a small overlap between neighbouring aubmissions.
Cosmid CBB Liess between and overlaps with cosmids C123 and C80 on the Aser: genomic restriction fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /note-"nominal overlap with S. coelicolor cosmid StC123"

It currently consists of 20 contigs. The true order of the places is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as tuns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It be updated with the finished sequence is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NOTE: This is a working draft' sequence. It currently consists of 20 confligs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the confligs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Theert size: 165454; agarose-fp

Claim 2: Pagea 15-18; 20pp; Japanese.
This cDNA encodes a haloperoxidase enzyme. The haloperoxidase genes encoding the enzymes CP. BPO1 and CP. BPO2 are lackated from Corallina pillulifera. A host cell transformed with a vector containing the haloperoxidase genes can be used for the recombinant production of the enzyme. The haloperoxidases of the invention are vanadium-dependent and have halde specificity of bromine and iodine.
Sequence 1791 BP: 390 A; 459 C; 507 G; 435 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              v56021.

PAY Polynucleotide(s) and proteins derived from Staphylococcus aureus - stored on computer readable medium and used in the production of stored on computer readable medium and used in the production of anti-S.aureus vaccines are consistent on the 179-148; 3271pp; English.

Tanti-S.aureus basents one of 5191 Staphylococcus aureus DNA sequences of the invention. The DNA sequences are recorded on a computer readable medium. preferably selected from a floppy or hard disk, random access medium. preferably selected from a floppy or hard disk, random access medium. preferably selected from a floppy or hard disk, random access medium. preferably selected from a floppy or hard disk, random access of the invention. The DNA sequences allow putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can also be used in a kit for the immunodetection of solved polypeptides can also be used in a kit for the immunodetection of solved polypeptides can also be used in a kit for the immunodetection of shin and surgical wound infections. scaled skin syndrome. toxic shock syndrome etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences contained on the computer readable medium.

The state of any of the saureus DNA sequences contained on the sequence 5280 BP: 2057 A: 744 C; 854 G; 1442 T;

Contain 1 rage 150; 2019; Bugatas, a virulence gene identified in this is the nucleotide sequence of a virulence gene identified in Staphylococcus nureus mutant P11066. S. aureus genes (see X07088-136) associated with virulence were identified by signature-tagged mutanes containing n chromosomal insertion of a signature inged transposon were generated, mutanes with nathence with the management of the mutanes with the nucleotide sequences of the regions flanking the transposon in the nucleotide sequences of the regions flanking the transposon in the nucleotide sequences of the regions flanking the transposon of insertion sites of these mutants were determined. Database sequence comparisons were parformed to identify the virulence genes and to determine the possible function of their protein product (see W97777) is unknown. But the gene is located near to the Opp operon.

W97680-724), The Plic66 virulence gene product (see W97777) is unknown but the gene is located near to the Opp operon.

Comparison search and an antibacterial agent involves assaying potential agents for the ability to directer with the expression of S. aureus virulence gene products. Also new is S. aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   340. gggagaaatcactaggtttcatccaagcgagacgccttatatcnngtacttggaaggct 399

stored on computer readable medium and used in the production of
anti-S.aureus vaccines
Claim 1: Page 569-573: 3271pp: English.

Cof the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a fioppy or hard disk, random access medium, preferably selected from a fioppy or hard disk, random access medium, preferably selected from a fioppy or CD-ROM. Romology searches using the S.aureus DNA sequences aliows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therepeutic or indistrial importance can be obtained. Specifically, sequences which are protein-encoded antigens have been identified and these polypeptides can also be used in a vaccine composition against S.aureus infection of the polypeptides can also be used in a fine for a sequence can be used in a variety lifety, eyelid infections, food polsoning, ottor secondablish was production of the polypeptides. The new DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences
                                                                                                                                                                                                                                                     "these bases represent a line of missing text in
the sequence listing in the specification. They
are included to maintain the nucleotide numbering
given in the specification for this DNA sequence".
                                                                                                                                                                                                                                                                                                                                                  these bases represent a line of missing text in
the sequence listing in the specification. They
are included to maintain the nucleotide numbering
given in the specification for this DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                these bases represent a line of missing text in the sequence listing in the specification. They are included to maintain the nucleotide numbering given in the specification for this DNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          these bases represent a line of missing text in
the sequence listing in the specification, They
are included to maintain the nucleotide numbering
given in the specification for this DNA sequence
                                                                                                                  Stabhylococcus aureus config SEQ ID #92.

This sequence represents a RACE generated fragment of a novel human catalytic telemerase sub-unit (PTC). The hTC protein can be used in screening assays to identify modulators of telemerase and to treat inhibit cellular disorders, death, defects and/or other pathological processes involving telemerase, particularly cancer and ageing (also suitable for this are agents thet stimulate, inhibit or mimic the action (by binding to specific mRNA), particularly in neoplastic cells and may be expressed in vivo. Antibodies and fragments of the protein, used as probes or primers, and may be expressed in vivo. Antibodies and fragments of the protein, used as probes or primers, by (i) detecting abnormal levels of the subunit protein in body fullids or tissues or (ii) by measuring the amount of the encoding nucleic acid. Expression of the nucleic acid amount of the encoding sucher acid. Expression of the nucleic acid the ubiquitous expression of the teatomerase RNA subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               24-MAY-1999 (first entry)

Ruman cetalytic telomerase sub-unit RACE-generated cDNA #3.

Ruman catalytic telomerase sub-unit, therapy; dispnosis; hrc; assay; modulator; telomerase subunit, therapy; dispnosis; hrc; assay; modulator; treatment; inhibit; cellular disorder; death; defect; cancer ageing; antidense; neoplastic cell; telomerase-related condition; RACE; qunour cell; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1555 tcagattgataggtgccgccgagctggcgcagcgtgcctcgtgttaccaaaagtggcagg 1614

Partial convacione 32 codes for a large portion (see W61349) of human relomerase protein 2 (TP2, see W61360), a novel protein of the telomerase complex. It was obtained by PCR amplification (see also V27873-74) of a human colon tumour cell line LIM1863 cDNA.
A 3° sequence was subsequently obtained the LIM1863 cDNA.
A 3° sequence was subsequently obtained (see V27875), and this construction of the clone 32 sequence to obtain full-length cDNA (see V27876) for human TP2 (see W61350). Expressing TP2 genes con a cell is used to increase techomerase activity and thus proliferation for treatment of e.g. HIV infection, AIDS and ageing disorders, while expressing an inactive mutant of TP2 (or molecule antisense to the gene) is used to detrease telomerase activity, e.g. for treatment of cancer. TR2 polypeptides can also be used to serve for agents that inhibit TP2 activity or its binding to TRIP1 (see W61347) or telomerase RNA, potentially useful therapeutically, also to raise specific antibodies useful immunoassays and therapeutically as inhibitors. Nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid encoding human telomerase protein-2 - used for egulating telomerase activity, e.g. for treating cancer or acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                in immunoassays and therapeutically as inhibitors. Nucleic acid fragments are used as diagnostic probes for detecting/quantifying TP2 DNA. Also contemplated are transpenic animals in which the TP2 gene has been inactivated or is overexpressed. TP2 polypeptides are administered i.v., s.c. or orally, or they are delivered from

Fure and recombinant human Telomerase Reverse Transcriptase and 1ts varianty. Watersty.

Fure and recombinant human Telomerase Reverse Transcriptase and in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing Disclosure: Fig. 20: 387pp; English.

Charles and ageing english.

Charles are sequence encodes a human telomerase reverse transcriptase (hTRT) variant from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the charge in hTRT recombinant protein or polynuclectide, on administration of the compound; (B) preparation of hTRT with a telomerase NA compound; (B) preparation of hTRT was a diministration of the compound; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplification product with presence of fMTR in the sample; and (D) carelating the presence of complex or amplification product with presence of thr causes in cell caresing htree capes of a services of a vertebrate cell by increasing htree capes of a product and correlating the complex or amplification of (E) the use of an agent that causes an increase in cell cape of the product and contract a medicament that inhibits the following and the polynuclectic endeading the following and the polynuclectic endeading the following and the polynuclectic endeading the following and t

The present sequence encodes human telomerase reverse transcriptase the content of the present sequence encodes human telomerase reverse transcriptase (hTRT), which is a ribonucleoprotein. The present invention also describes the following methods: A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant content of the compound; (B) protein or polymoricleotide, on administration of the compound; (B) preparation of hTRT with a telomerase by contacting a protein of preparation of hTRT with a telomerase by contacting a protein of preparation of hTRT with a telomerase by contacting a protein of amplifying the product and correlating the presence of complex or amplifying the product and correlating the presence of complex or amplifying the product and correlating the presence of complex or amplifying the product and correlating the presence of complex or increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell research and the polymoric of the presence of ageing the proliferation of hTRT and the polymoric of inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used in preparation of hTRT can also be used in the new entire and in the new horse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1495 giocaitcaicgacagigaicggcaggcaitcgicaaciicggcacgicicaciii554

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence represents a RACE generated fragment of a novel human catalytic telomerase sub-unit (InfC). The hTC protein can be used in screening assays to identify modulators of telomerase and to treat of inhibit cellular disorders, death, defects and/or other pathological processes involving telomerase, particularly cancer and ageing (also suitable for this are agents that simulate, inhibit to mimic the activity of the subunit). Antisense nuclear actis inhibit telomerase action (by binding to specific mank), particularly in neoplastic cells and may be expressed in vivo. Antibodies and fragments of the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1063 GACCAAGCACTTCCTCTACTCCTCAGGCGACAAGGAGCAGCTGCGGGCCCTCCTACT 1122

Human, catalytic telomerase subunit, therapy; diagnosis; hTC; assay;
modulator; treatment; thiblibit; callulat disorder; death; defect; cancer
ageing; antisense; neoplastic cell; telomerase related condition; RACE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         used as probes or primers, are used to diagnose telomerase-related conditions (especially neoplasia) by (il detecring abnormal levels of the subunit protein in body fluids or tissues or (11) by measuring the amount of the encoding nucleic acid. Expression of the nucleic acid encoding the subunit mRNA is confined to tumour cells, in contrast to the ubiquitous expression of the telomerase RNA subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1495 giccalicategacagigateggeaggeggettegteaactieggeaegicteactaci 1554

The present sequence of the catalytic subunit of a human the present sequence afforms the catalytic subunit of a human telemerase holocargyme. Disruption of the telemerase general alters telemerase not the DNA is assertial for telemerase and a constituted to active telemerase complex. The products can be used for increasing or reducing the lifespan of cells such as cancer cells or transformed cells. They can also be used in the diagnosis and treatment of malignancies. In addition, cells with a longer lifespan can be transplanted into or grafted onto an individual (e.g. as skin and enzymes), to whom they provide therapeutic proteins, such as hormones sequence 4023 BP, 668 %; 1363 C; 1277 G: 715 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1555 teagattgatagtgeegeegagetggegeagegtgeetegtgttaceaaaagtggeagg 1614

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes human telemerase reverse transcriptase (hTRT), which is a ribonucleoprotein. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant to protein or polynuclectide, on administration of the compound; (B) protein or polynuclectide, on administration of the compound; (B) preparation of hTRT with a telomerase NNA cumponent; (C) detection of preparation of hTRT with a telomerase NNA cumponent; (C) detection of preparation of hTRT with a sample by indiging a protein of amplifying the protein or protein in a sample by indiging a regievant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplifying the product and correlating the presence of complex or amplifying the product and correlating the presence of not in the cample; and (D) increasing the proliferation of a vertebrate call by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate call proliferation of hTRT and the polyauclectic effect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting the cativity. A protein preparation of hTRT can also be used in the new methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pure and recombinant human Telomerase Reverse Transcriptase and its
variants - are useful in the diagnosis, prognosis and treatment of
cell proliferation conditions especially cancer and ageing
Example 1, Fig 74; 387pp; English.
The present sequeace encodes human telomerase reverse transcriptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1615 tgcatcgatttgcacgccccgaggetctcggggggtaccctccacaacaccatcgc 1669

Claim 4; Fig 1; 76pp; German.

Chico. The encoded protein can be used in screening assays to identify this sequence encoded protein can be used in screening assays to identify the encoded protein can be used in screening assays to identify the encoders and ageing (also suitable for this are agents that particularly cancer and ageing (also suitable for this are agents that stimulate, inhibit or mimic the activity of the subunity. Antisense nucles acids inhibit telomerase action (by binding to specific mans, or particularly in neoplastic cells and may be expressed in vivo. Antibodies and fragments of the protein, used as probes or primers, are used to diagnose telomerase related conditions (eapecially neoplasta) by (i) detecting abnormal levela of the aubunit protein in body fluids or times are of illy by measuring the amount of the encoding nucleic acid the nucleic acid encoding the aubunit mans is confined to tumour cells, in contrast to the ubiquitous expression of the telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0; Gaps

"The Machination of this BAC-and sequence was carried out as part of a collaboration with the Barkeley Drosophila Genome Project (BDCP). The Machination with the Barkeley Drosophila Genome Project (BDCP). The Machination of this BAC-and the Drosophila melanogaster genome using the AGE-s for further information please see http://www.fruitfly.org The BDCP Drosophila melanogaster BAC ilbrary was prepared by Kazuroty Googawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Aaron Mammoser in Pieter de Jong's laboratory in the Department of NY. The library is named ReCI-99 and was constructed by partial EcoRI digestion of Drosophila DRA provided by the BDCP-from the isogenic strain y? on bw sp. the same strain used for the BDCP's Pl and EST libraries. A more detailed description of the library and how to order individual RAC clones, the entire library, or filters for hybridization from the BACPAC Resource.Center can be found at http://bacpac.med.lufalo.edu/drosophila_bac.htm.

                                                  - Wab: www.genoscope.cns.frace.compare representations.compare the collaboration of this BAC-end sequence was/carried out as part of a collaboration with the Backedey Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fultily.org the BDCP Drosophila melanogaster BAC library was prepared by Kazucyo Osoegawa and Aaron Mammoser in Pieter de Jong is laboratory in the Department of Cancer Genetics at the Roswell park Cancer Institute in Buffalo. NT. The library is named ReC198 and was constructed by partial Ecost digestion of Drosophils DNA provided by the BDGP from the 190genic strain ys; on by sp, the same strain used for the BDGP's pl and EST libraries A more detailed description of the library and how to order individual BAC clones, the entire library and how to order individual BAC clones, the entire library found at http://bacpac.med.uffalo.edu/drosophila_bac.htm.
